James Delosh

Senior Solutions Architect

Raleigh, NC | 617-602-2160 | james@delosh.me | LinkedIn | jamesdelosh.com

Technical Expertise

Solutions Engineering: Technical Discovery, Solution Architecture, Product Demonstrations, Proofs of Concept, Technical Enablement, RFPs, Customer & Partner Integrations

Platforms & Security: SIEM, SOAR, EDR, Firewalls, Splunk, IBM QRadar, MITRE ATT&CK, Incident Response, Adversary Emulation

Integration & Development: REST APIs, OAuth 2.0, Webhooks, Python, JSON, SaaS & On-Premises Integrations

Professional Experience

Remote (remote.com)

Senior Solutions Architect, Platform Partnerships *2026 - Present*

- Serve as the technical liaison between strategic platform partners and Remote Product and Engineering teams, translating partner requirements into scalable integration solutions.
- Shape partner integration architecture through technical discovery and design discussions spanning APIs, OAuth, webhooks, SDKs, and embedded product experiences.
- Partner with external engineering teams throughout the integration lifecycle, providing architectural guidance, troubleshooting support, and technical validation.

RangeForce (Acquired by Cyberbit)

Solutions Engineer *June 2024 - October 2025*

- Drove pre-sales engagements across the United States through technical discovery, product demonstrations, and solution validation.
- Tested and facilitated live-fire cybersecurity exercises for prospects and customers, guiding teams of 4-10 participants through scenarios involving SIEM, EDR, firewall, and case-management technologies.
- Identified environmental, configuration, content, and functionality issues that could affect exercise delivery and training content, working with internal teams to improve technical accuracy and customer experience.

SCYTHE

Adversary Emulation Engineer *May 2023 - April 2024*

- Managed technical discovery, demonstrations, PoCs, and RFP responses for nationwide opportunities.
- Helped security teams build adversary-emulation workflows using SCYTHE and MITRE ATT&CK while demonstrating interactions with EDR, SIEM, and firewall technologies.
- Troubleshot customer deployments and translated field feedback and technical requirements to Product teams.

Hunters

Senior Sales Engineer *September 2021 - January 2023*

- Guided enterprise accounts across the Mid-Atlantic through technical evaluations and PoCs, scoping security-data ingestion to balance sufficient coverage with a manageable evaluation scope.
- Coordinated with customer engineering teams and Hunters' engineering and detection teams to troubleshoot data pipelines, validate detections and alerts, and ensure customer data surfaced effectively within the platform.
- Served as a customer advocate to Product and Engineering, identifying technical bottlenecks and providing field feedback to improve data onboarding and product usability.

Verodin (Acquired by FireEye; Now Google Cloud)

Consulting Engineer *April 2020 - May 2021*

- Selected as the dedicated Verodin SME embedded with the attack-simulation team of a major global financial-services customer, providing full-time technical support and platform guidance.
- Diagnosed network connectivity, platform, content, and SIEM integration issues across complex deployments while serving as liaison between customer engineering and Verodin Product and Engineering.
- Partnered with customer engineers to reproduce and escalate complex platform issues, including a Mac agent registration failure ultimately traced to a source-code defect.

Sales Engineer *December 2018 - April 2020*

- Owned the technical pre-sales cycle across the Mid-Atlantic and Public Sector, from demonstrations and discovery through controls-validation PoCs.
- Scoped PoCs by identifying relevant security controls, defining test use cases, selecting attack content, and guiding customers through platform deployment and configuration.
- Developed executive-level PoC readouts connecting technical validation results to security outcomes, control gaps, and business value.

SAS Institute

Channel Pre-Sales Systems Engineer *May 2018 - December 2018*

- Supported technical partner enablement for the SAS Viya platform, including deployment guidance, competitive analysis, and evaluation of channel training materials.

IBM Resilient

Enterprise Sales Engineer *January 2017 - May 2018*

- Supported six account executives across the East region before assuming responsibility for the Southeast, owning technical discovery, demonstrations, PoCs, and customer enablement for the Resilient SOAR platform.
- Managed SaaS and on-premises evaluations involving virtual-appliance deployment, security-tool integrations, and incident-response playbooks.
- Developed Python-based integration functionality between Resilient and Carbon Black Response; collaborated with Carbon Black to demonstrate an end-to-end workflow spanning endpoint detection, QRadar, Resilient, and automated response.
- Helped develop an internal SE boot camp focused on integration fundamentals and hands-on platform configuration.

Dell EMC

Information Security Analyst *July 2015 - December 2016*

- Investigated and responded to security incidents across a global enterprise environment involving endpoint security, malware, and data-loss-prevention technologies.
- Contributed to incident-response processes, detection criteria, technical documentation, and onboarding materials.

United States Marine Corps

Amphibious Assault Vehicle Crew Chief *August 2006 - May 2010*

- Led and trained an 18-person unit as a Corporal while maintaining accountability for personnel, multi-million-dollar military vehicles, and equipment.

Education

Northeastern University

Bachelor of Science, Computer Engineering
